

- **Plug-and-play installation**
- **Remote SNMP management**
- **Fiber or equipment optical protection in less than 10ms**
- **Independent of transmission protocol, data rate or wavelength**
- **Programmable alarm settings, switching thresholds and recovery hysteresis**
- **Manual and Auto switching modes**

Net-Ready Optical Protection Switch

NET-Ready Protection Switch ensures network connectivity by providing the (1+1) or (1:1) optical channel or fiber trunk protection. The protection switch monitors the power level of each active link and switches to the protection link if a power failure is detected. With a 1U standard rack mountable chassis package and network ready communication interface, the NET-Ready Protection Switch delivers a cost-effective, easy-to-install solution and simple, reliable protection for all new and existing services.
